

jamesbury

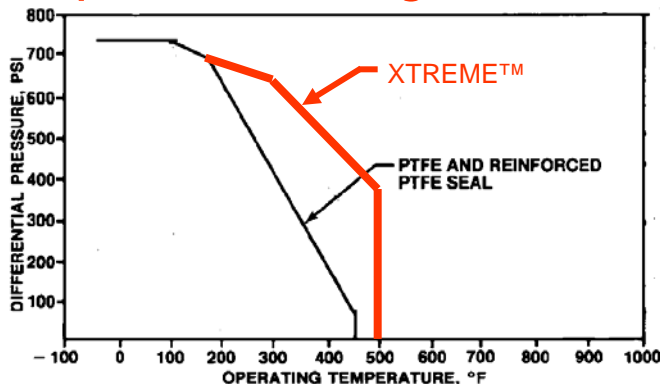

Soft seated high performance butterfly and ball valves for bubble tight shutoff

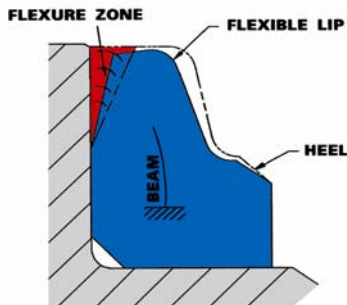

- Ball valves through 24"
- Butterfly valves through 60"

Choose Jamesbury when dependability is your key selection criteria.

Jamesbury's patented Xtreme® seat material extends the temperature range of soft seated valves

This graph compares the pressure – temperature capability of Jamesbury ball and butterfly valves with patented Xtreme® molecularly enhanced fluoro carbon seat material with typical PTFE seat ratings.

No springs or "O" rings

The Jamesbury ball valve **flexible lip** seat design provides greatly improved sealing at low pressures and under temperature and pressure cycling.

The exclusive Jamesbury *WAFER-SPHERE* **one piece seat** design, unlike other brands of high performance butterfly valves, does not require springs or "O" rings to attain a bubble tight seal at both high and low pressures. The benefit is greatly simplified maintenance and elimination of chemical compatibility problems.
